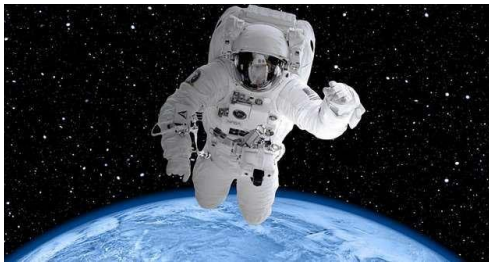
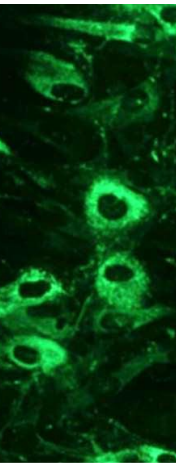
Dermosculpt: The green 360° collagen booster

Are you already familiar with the health-boosting Chlorella Growth Factor (CGF)? This unique growth factor is produced by the green microalga *Chlorella vulgaris* and is responsible for its ability to multiply four times every 20 to 24 hours.

The active ingredient Dermosculpt is extracted from chlorella. The unicellular microalga contains up to 70% plant proteins and the entire spectrum of amino acids (including the eight essential amino acids) that are also found in human collagen fibres.

Dermosculpt reactivates the skin's cellular growth factors; collagen synthesis in the dermis, DEJ and epidermis is massively increased in part. The 360° collagen booster smoothes and firms the skin not only on the face, but also on the neck and décolleté.





Proven efficacy:
- ✓ Activation of fibroblast growth factors
- ✓ Reactivates collagen synthesis and GAGs
- ✓ Significantly increases the tonicity of the skin
- ✓ Smoothes the relief of the neck and décolleté

Applications:
- Smoothing treatments for neck and décolleté
- 360° Collagen Booster
- Rich night cream with amino acids

The green microalga chlorella has made it into space: NASA selected it because of its perfect nutrient content. It contains over 100 nutrients and more than twice as much protein as fish or meat.

INCI DERMOSCULPT GMNB: Glycerin (and) Water (and) Chlorella vulgaris extract (and) Sodium benzoate (and) Citric acid

Properties:
- Liquid, water soluble
- Recommended use level: 2 %
- COSMOS approved
